DETAILED ACTION

1. Claims 1-59 are allowed.

2. The following is an examiner's statement of reasons for allowance:

The prior art of record does not disclose or suggest the following in combination with the remaining limitations of the claims:

A method for use in detecting deception of a person, wherein transforming the thermal image data to blood flow rate data comprises calculating a change of blood flow rate over the plurality of frames of the thermal image data (see claim 1).

A system for use in detecting deception of a person, the system comprising a computing apparatus operable upon the thermal image data to transform the thermal image data to blood flow rate data by calculating a change of blood flow rate over the plurality of frames of the thermal image data (see claim 12).

A polygraph method for use in determining whether a person is being deceptive or non-deceptive with respect to a response elicited from the person, wherein transforming the thermal image data to blood flow rate data comprises calculating a change of blood flow rate over the plurality of frames of the thermal image data (see claim 23).

A method for use in monitoring blood flow rate, wherein transforming the thermal image data to blood flow rate data comprises calculating a change of blood flow rate over the plurality of the frames (see claim 30).

A system for use in monitoring blood flow rate, the system comprising a computing apparatus operable upon the thermal image data to transform the thermal image data to blood flow rate information by calculating a change of blood flow rate over the plurality of the frames of the thermal image data (see claim 36).

A system for use in detecting deception of a person, the system comprising a computing apparatus operable upon the thermal image data to transform the thermal image data to blood flow rate data by using a thermodynamic model where changes of blood flow rate is inversely proportional to the square of skin temperature deviation from a core temperature of a human body (see claim 45).

A system for use in monitoring blood flow rate, the system comprising a computing apparatus operable upon the thermal image data to transform the thermal image data to blood flow rate data by using a thermodynamic model where changes of blood flow rate is inversely proportional to the square of skin temperature deviation from a core temperature of a human body (see claim 56).

The examiner's reasons for allowance for claims 41-44 and 49-55 are stated in the Office action mailed 7/16/04.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mirells Jagan whose telephone number is 571-272-2247. The examiner can normally be reached on Monday-Friday from 10AM to 4PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Diego Gutierrez can be reached on 571-272-2245. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
